No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 8, Ay

                                                                                                                                                                                                                                                                                                                                                    The present sequence is given in a specification relating to novel oral bacterial polypeptide referred to as periodontain. The polypeptide has amidolytic activity for cleavage of denatured polypeptides and nondenatured serpin polypeptides. It has amidolytic activity for cleavage of a non-denatured human alpha 1-proteinase inhibitor at a reactive site loop region of the inhibitor. Periodontain is useful for inhibiting the peptidase activity and reducing periodontain, loss of tooh attachment and periodontal pocket formation, and for reducing growth of bacteria, preferably P. gingivalis in vitro or in vivo. It is useful for protecting an animal from a disease caused by P. gingivalis and for treating periodontal diseases, including gingivitis and periodontitis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         192 FTQSKYLMIYKDNETLDSNTQIEVYLTT----KQPVVKSLLDSKGIHYNQGNPYNLLTFVI 248

hyperimmune serum reactive antigen or its fragment from Streptococcus pyogenes. The nucleic acid molecule or hyperimmune serum-reactive antigen or its fragment from Streptococcus or its fragment are useful for the manufacture of a pharmaceutical preparation, especially a vaccine, against S. pyogenes infection. In addition, the hyperimmune serum reactive antigen or fragment is used for the isolation and/or purification and/or identification of an interaction partner of the hyperimmune serum reactive antigen or its fragment, for the generation of a poptide (e.g. anticalines) binding to the antigen or fragment, or for the manufacture of a functional nucleic acid selected fragments and spiegelmers. The nucleic acid molecule may also be used for the manufacture of functional ribonucleic acids such as ribozymes, antisense nucleic acids and siRNA. ADR83733-ADR84189 represent S. pyogenes hyperimmune serum reactive antigens, fragments and the encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             426

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180
                                                                                                                                                                                                                                                        The invention provides a superantigen toxin DNA fragment which has been genetically altered such that binding of the encoded altered toxin to either the MHC class II or T cell antigen receptor is disrupted or altered. DNA fragments of the invention are useful in the production of vaccines against bacterial superantigen toxin infections. They are also useful in gene therapy. The present sequence is Streptococcus pyogenes mature pyrogenic exotoxin B (SpeB) mutant protein. This sequence is used in the invention. Note: This sequence is not shown in the specification, but is derived from S. pyogenes mature wild-type SpeB protein (AAE37686)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                            New superantigen toxin DNA fragment, useful for preparing a composition for treating or preventing bacterial infection.

          activity. [1], nucleic acids encoding [1], ABN66044-ABN71526 and antibodies that bind [I] are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. Nucleic acids encoding [I] are used to detect Streptococcus in a biological sample. [I] is used to detectmine whether a compound binds to used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be meningitis. Nucleic acid encoding (I) may be used to recombinantly produce [I] and may be used in gene therapy. Antibodies to (I) are used for affinity chromatography, immunoassays, and distinguishing/identifying
antibacterial and antiinflammatory

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention provides a superantigen toxin DNA fragment which has been genetically altered such that binding of the encoded altered toxin to either the MHC class II or T cell antigen receptor is disrupted or altered. DNA fragments of the invention are useful in the production of vaccines against bacterial superantigen toxin infections. They are also useful in gene therapy. The present sequence is Streptococcus pyogenes pyrogenic exotoxin B (SpeB) protein. This sequence is used in the
                                               superantigen toxin DNA fragment, useful for preparing a composition treating or preventing bacterial infection.
                                                                                                                                                                                                                                                                                                                                RKVKPGEQSFVGQHAATGCVATATAQIMKYHNYPNKGLKDYTYTLSSNNPYFNHPKNLFA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated and purified superantigen toxin DNA fragment is altered so that binding of the encoded altered toxin to either the Mic Class II or T cell antigen receptor is altered. Also included are a recombinant DNA construct (comprising a vector and an isolated and purified altered superantigen toxin DNA fragment), a host cell transformed with the recombinant DNA construct, producing altered superantigen toxin, an altered TST-1 (toxic shock syndrome toxin) superantigen toxin peptide, diagnosing superantigen-associated bacterial infection, a vaccine (comprising an altered superantigen toxin for producing antigenic and immunogenic response resulting in the protection of a mammal against superantigen-associated bacterial infection, an treating/ameliorating a superantigen-associated bacterial infection, and a mammal against superantigen-associated bacterial infection, and an intibody which recognises altered TSST-1 superantigen toxin and an antibody which recognises altered TSST-1. Also disclosed are mutated staphylococcal enterotoxin A, B, C1 (SEA, SEB), The superantigen toxin DNA fragment is useful for preparing a composition for treating or preventing baccerial infection. The present sequence represents the wild-type SPBb pro-protein
                                                                                                                                                                                                                                                                                                                                                                                                                       Streptococcus pyrogenic enterotoxin a; vaccine; superantigen toxin; MHC; superantigen-associated bacterial infection; bacterial infection; antibacterial.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       superantigen toxin DNA fragment, useful for preparing a composition treating or preventing bacterial infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            셤
                                                                                                                                                                                                                                                                                                                                                                                                                              This sequence represents the S. pyogenes cysteine protease speB7. The invention relates to a method for determining the presence of a Group A Street which expresses an extracellular protease (preferably speB) capable of degrading proteins of the extracellular matrix, comprising:

(1) combining a sample with an assay medium comprising a first member of a specific binding pair which binds to a second member of the binding pair which binds to a second member of the binding pair where the first member has at least 1 epitopic site competitive with at least 1 conserved epitopic site on the protease; and (2) detecting complex formation as indicative of the presence of the patence of infection with Streptococcus pyogenes and for monitoring the disease status of the host. The speB gene products are used as a vaccine for protecting against Streptococcus mediated diseases such as for protecting against Streptococcus mediated diseases such as paryngitis, tonsillitis, skin infections, scarlet fever, sepsis, erysipelae, fascilitis, pneumonia, acute rheumatic fever, sepsis, erysipelae, fascilitis, pneumonia, acute rheumatic fever, sepsis, and
                                                                                                                                                                                                                                                                                                                               Determining the presence of a Group A Streptococcus expressing a protease capable of degrading proteins of the extracellular matrix, using a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              248
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 308

The invention relates to treating a subject with cancer. The method involves administering an amount of a superantigen (SAg) composition comprising a molecule selected from: a native SAg protein; its biologically active fragment or a native SAg protein; its biologically active fragment or comprising the SAg or its fragment or homologue fused to a fusion protein comprising the SAg or its fragment or homologue fused to a fusion partner polypeptide or peptide. The SAg is selected from Staphylococcal enterotoxin, a Streptococcal pyrogenic exotoxin, Y. pseudotuberculosis SAg, Mycoplasma arthritides SAg and Clostridium perfringens exotoxin. The method is useful in treating cancer or malignant diseases such as malignant pleural effusion, ascites,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Treating a subject with cancer or malignant diseases comprises intratumoral, intrathecal or intracavitary administration of an amount of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                173

The present sequence is the Streptococcus pyogenes clone speB7 pre-pro cysteine protease (CP), which can be used to inhibit neoplastic cell proliferation, especially in a human, useful in the treament of neoplastic conditions, e.g. carcinomas, sarcomas, melanomas, lymphomas and leukaemias originating from blood, lung, mammary gland, prostate, intestine, stomach, liver, heart, skin, pancreas or brain tissue. The CP is especially associated with a wound covering, and can also be used to prevent metastasis or identify susceptible neoplastic cells. K1735 and CM519 melanoma cells were injected s.c. into nu/nu mice, optionally followed by i.p. injection of CP (100 microg, 24 hours later). The mice were checked twice weekly for tumour growth for 12 weeks, to give results that showed that treatment with CP completely protected athymic mice against transplanted K175 melanoma growth, and protected 60% of the mice
                                                                                                                                                                                                                                                                                                                                                                                                               248

                                                                                                                                                                                                                                                                                                                     The present sequence is the S. pyogenes speB gene encoded extracellular protease. An immunogenic peptide derived from the protease can be used in the prodn. of antibody (Ab) and vaccine. Ab is prepd. by introducing the peptide into a mammal, pref. a mouse, followed by Ab isolation. The Ab or a probe derived from the gene can be used for the diagnosis and detection of gp. A Streptococcus infections, while vaccine, which inhibits streptococcus infections, and be used to prevent and treat gp. A Streptococcus infections, and partic. to ameliorate pharyngitis, to sillifis, skin infections, acute rheumatic fever, scarlet fever, post-streptococcus glomerulonephritis, sepsis, meningitis, erysipelis, cellulitis, fasciitis and toxic shock like syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AISTRQYNWNNILPTYSGRESNVQKWAISELMADVGISVDMDYGPSSGSAGSSRVQRALK 368

DNA fragments of the invention are useful in the production of vaccines against bacterial superantigen toxin infections. They are also useful in gene therapy. The present sequence is Streptococcus pyogenes mature pyrogenic exotoxin B (SpeB) protein. This sequence is used in the invention
                                                                                                                                      9
SPEb). The superantigen toxin DNA fragment is useful for preparing a composition for treating or preventing bacterial infection. The present sequence represents the wild-type SPEb mature protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New superantigen toxin DNA fragment, useful for preparing a composition for treating or preventing bacterial infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention provides a superantigen toxin DNA fragment which has been genetically altered such that binding of the encoded altered toxin to either the MHC class II or T cell antigen receptor is disrupted or altered. DNA fragments of the invention are useful in the production of vaccines against bacterial superantigen toxin infections. They are also useful in gene therapy. The present sequence is Streptococcus pyogenes mature mutant pyrogenic exotoxin A (SpeA)-mature mutant SpeB fusion protein. This sequence is used in the invention. Note: This sequence is not shown in the specification, but is derived from S. pyogenes mature wild-type SpeA-SpeB protein (AAE37684)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               superantigen toxin DNA fragment, useful for preparing a composition treating or preventing bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1 MOODPDPSQLHRSSLVKNLQNIYFLYEGDPVTHENVKSVDQLRSHDLIYNVSGPNYDKLK

fragment is altered so that binding of the encoded altered toxin DNA fragment is altered so that binding of the encoded altered toxin to either the MHZ class II or T cell antigen receptor is altered. Also included are a recombinant DNA construct (comprising a vector and an isolated and purified altered superantigen toxin DNA fragment), a host cell transformed with the recombinant DNA construct, producing altered superantigen toxin, an altered TSST-I (toxic shock syndrome toxin) superantigen toxin, peptide, diagnosing superantigen-associated bacterial infection, a vaccine (comprising an altered superantigen toxin for producing antigenic and immunogenic response resulting in the protection of a mammal against superantigen-associated bacterial infection, an treating/ameliorating a superantigen-associated bacterial infection, treating/ameliorating a superantigen-associated bacterial infection, an antisera isolated from individuals immunised with one or more altered TSST-I superantigen toxin and an antibody which recognises altered TSST-I superantigen toxin and an antibody which recognises altered TSST-I. Also disclosed are mutated staphylococcal enterotoxin a and b (SPEa and SEE) SEC1) and streptococcal pyrogenic enterotoxin a and b (SPEa and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        g
                                    The invention relates to an isolated and purified superantigen toxin DNA fragment is altered so that binding of the encoded altered toxin to either the MHC class II or T cell antigen receptor is altered. Also included are a recombinant DNA construct (comprising a vector and an isolated and purified altered superantigen toxin DNA fragment), a host cell transformed with the recombinant DNA construct, producing altered superantigen toxin, an altered TSST-1 (toxic shock syndrome toxin) unfection, a vaccine (comprising an altered superantigen toxin for producing antigenist superantigen associated bacterial infection), treating/amellorating a superantigen-associated bacterial infection), treating/amellorating a superantigen-associated bacterial infection), creating/amellorating a superantigen-associated bacterial infection), an antisera isolated from individuals immuniated with one or more altered TSST-1 superantigen toxin and an antibody which recognises altered TSST-1 Superantigen toxin and an antibody which recognises altered TSST-1. Also disclosed are mutated staphylococcal enterotoxin A, B, C1 (SEA, SEB, SEC1) and streptococcal pyrogenic enterotoxin A, B, C1 (SEA, SEB, SEC1) and streptococcal pyrogenic enterotoxin a and b (SFB, and Composition for treating or preventing bacterial infection. The present sequence represents the SPEB ILAZR/SPEB (478 mutant fusion protein. Note: The present sequence is described as having the Cys to Ser mutation in the SPEB portion at residue 257 (corresponding to amino acid 47 of mature composition for treating and security and security and security and security and security and security and security and security and security and security and security and security and security and security and security and security and security and security and security and security as a security and security and security and security and security as security and security and security and security and security and security and security and security and security and security and security and securit

The invention provides a superantigen toxin DNA fragment which has been genetically altered such that binding of the encoded altered toxin to either the MHC class II or T cell antigen receptor is disrupted or altered. DNA fragments of the invention are useful in the production of vaccines against bacterial superantigen toxin infections. They are also useful in gene therapy. The present sequence is Streptococcus pyogenes pyrogenic exotoxin A (SpeA)-SpeB fusion protein. This sequence is used i

Amino aci Amino aci

```
New superantigen toxin DNA fragment, useful for preparing a composition for treating or preventing bacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SPEa; streptococcus pyrogenic enterotoxin; mutant; vaccine; mutein; superantigen toxin; MHC; superantigen-associated bacterial infection; bacterial infection; antibacterial; SPEb.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 2, Application US/08446918A
Patent No. 5705151
GENERAL INFORMATION:
APPLICANT: Elmslie, Robyn E.
TITLE OF INVENTION: GENE THERAPY FOR T CELL REGULATION
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
ADDRESSEE: Sheridan Ross & McIntosh
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 FDFFPEPEFTQSKYLMIYKDNETLDSNTSQIEVYLTTK 220
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        FDFFPEPEFTQSKYLMIYKDNETLDSNTSQIEVYLTTK 251
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
FILING DATE: 18-MAY-1995
CLASSIFICATION: 552
                                                                                                                                                                                                        24;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

Patent No. 669746

GENERAL INFORMATION:
APPLICAMT TERMAN. David S.
TITLE OF INVENTION: TUMOR KILLING EFFECTS OF ENTEROTOXINS,
TITLE OF INVENTION: SUBERANTIGENS, AND RELATED COMPOUNDS;
FILE REFERENCE: 09629/005002;
CURRENT APPLICATION NUMBER: US/09/708,008B

CURRENT FILING DATE: 2000-11-08

PRIOR APPLICATION NUMBER: US/08/896,933

PRIOR FILING DATE: 1997-07-18

PRIOR PLICING DATE: 1994-06-02

PRIOR FILING DATE: 1994-06-02

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 16, Application US/08882431B

Patent No. 6713284

GENERAL INFORMATION:
APPLICANT: Robert G. Ulrich,
APPLICANT: Sina Bavari
TITLE OF INVENTION: Bacterial Superantigen
TITLE OF INVENTION: Vaccines
NUMBER OF SCUURNCES: 25
CORRESPONDENCE ADDRESS:
ADDRESSEE: Charles H. Harris
STREET: US Army MEMC -504 Scott Street MCMR-JA (Charles H. Harris-Patent Atty)
